

#BCS middle schools offer students opportunities to explore and engage with many different subjects. At [Charles D. Owen Middle School](#), kids who love science have a unique opportunity to deepen their knowledge with fun, hands-on activities.

According to 7th-grade science teacher Brittany Krasutsky, Warren Wilson Thursday is a science club for students who love to see science happen by doing hands-on experiments. Each week, students perform an experiment, then get to take what they created home with them.

Students have grown crystals, extracted DNA from fruit, made glow in the dark slime, and see a pumpkin breathe fire. Each lab focuses on the chemistry behind the phenomenon, so students are strengthening their STEM knowledge while having a great time.

This club is a grant funded by [Warren Wilson College](#) in partnership with Owen Middle.
